This book is a comprehensive guide for developing an effective preventive maintenance program for any facility. Topics include facility inspection and assessment, effective lubrication practices, commercial roofing repair, indoor air quality management, applicable government codes, standards and regulations, detailed preventive maintenance procedures, and maintenance scheduling. Specific maintenance approaches are examined for more than 100 types of equipment and building components. Also discussed are the economic value of preventive maintenance, management and motivation of the preventive maintenance team, and setting up a computerized maintenance management system (CMMS).

This text addresses in great detail the requirements for designing, implementing, and managing programs and procedures for the maintenance of major building elements from the foundation to the roof, including interior and exterior support systems and sitework elements. Topics include facilities as assets, major renovations, preventative maintenance, special maintenance considerations, and designing for building maintenance.

This book provides the reader with the key multi functional engineering building blocks required for implementing proper Maintenance and Facilities Management. It is an accumulation of more than 30 years of 'on the job' multi disciplined general engineering knowledge and is a synopsis of the expert training gained. It has been written to assist Managers, Engineers, Tradesmen, Apprentice tradesmen or D.I.Y. specialists. System 'know how', increasing equipment efficiency, tight budget control, cost cutting implementation and freeing up capital are paramount to a business's survival. By applying the practical principles and practices outlined. Using hard and soft skills, a business and its personnel will quickly reap the benefits and rewards. This is most effective book I have ever read and truly covers every aspect of Maintenance and Facilities Management. It is compelling, interesting, and ground breaking in its method and approach. I have already applied the material here to excellent effect and would highly recommend this book for any aspiring engineer or manager as the one book

This new book synthesizes a wide range of interdisciplinary literature to provide the state-of-the art of biomedical implants. It discusses materials and explains the three basic requirements for implant success from a surface engineering perspective: biological compatibility, biomechanical compatibility, morphological compatibility. Biomedical, mechanical, and materials engineers will find this book indispensable for understanding proper treatment of implant surfaces in order to achieve clinical success. Highlights include: □ Coverage of surface engineering of polymer, metallic, ceramic and composite implant materials; □ Coverage of chemical, mechanical, physical, thermal, and combined surface modification technologies; □ Explanations of interfacial reaction between vital tissue and non-vital implant surface; and □ Methodologies and technologies for modification of surface layer/zone to promote the osteo-integration, the ultimate success for biomedical implants in both dental and medical practice.

This new edition of an informative and accessible book guides building surveyors and facilities managers through the key aspects of property maintenance and continues to be of value to both students and practitioners. With the increasing cost of new-build, effective maintenance of existing building stock is becoming ever more important and building maintenance work now represents nearly half of total construction output in the UK. Building Maintenance Management provides a comprehensive profile of the many aspects of property maintenance. This second edition has been updated throughout, with sections on outsourcing; maintenance planning; benchmarking and KPIs; and current trends in procurement routes (including partnering and the growth of PFI) integrated into the text. There is also a new chapter on the changing context within which maintenance is carried out, largely concerned with its relationship to facilities management. More coverage is given of maintenance organisations and there are major updates to relevant aspects of health and safety and to contract forms.
