Citizenship Now Rethinking Our Roles In 21st Century America

In the 19th and 20th centuries, "citizenship" broke loose from its original relationship with "the city" and became embedded instead in the emerging concept of the nation-state. All nations are to some degree artificial constructs. As Hobsbawm wrote: "for the purposes of analysis nationalism comes before nations.

Whether or not we would put it in these terms, remembering such teachers is to recall how they contributed to shaping us as citizens—their role in our citizenship education, understood in its broadest sense as the fostering of capacities and dispositions to participate in society and democracy. In addition to the debate on violent extremism, its causes and the role of education in preventing it—which follows each terrorist act of barbarity—these sentiments remind us that education has ...

Like the schools in which it is taught, social studies is full of alluring contradictions. It harbors possibilities for inquiry and social criticism, liberation and emancipation. Social studies could be a site that enables young people to analyze and understand social issues in a holistic way – finding and tracing relations and interconnections both present and past in an effort to build meaningful understandings of a problem, its context and history; to envision a future where specific social problems are resolved; and take action to bring that vision in to existence. Social studies could be a place where students learn to speak for themselves in order to achieve, or at least strive toward an equal degree of participation and better future. Social studies could be like this, but it is not. Rethinking Social Studies examines why social studies has been and continues to be profoundly conversing in nature, the engine room of illusion factories whose primary aim is reproduction of the existing social order, where the ruling ideas exist to be memorized, regurgitated, internalized and lived by. Rethinking social studies as a site where students can develop personally meaningful understandings of the world and recognize they have agency to act on the world, and make change, rests on the premises that social studies should not show life to students, but bringing them to life and that the aim of social studies is getting students to speak for themselves, to understand people make their own history even if they make it in already existing circumstances. These principles are the foundation for a new social studies, one that is not driven by standardized curriculum or examinations, but by the perceived needs, interests, desires of students, communities of shared interest, and ourselves as educators. Rethinking Social Studies challenges readers to reconsider conventional thought and practices that sustain the status quo in classrooms, schools, and society by critically engaging with questions and issues such as: neutrality in the classroom; how movement conservatism shapes the social studies curriculum; how corporate-driven education affects schools, teachers, and curriculum; ways in which teachers can creatively disrupt everyday life in the social studies classroom; going beyond language and inclusive content in social justice oriented teaching; making critical pedagogy relevant to everyday life and classroom practice; the invisibility of class in the social studies curriculum and how to make it a central organizing concept; class war, class consciousness and social studies in the age of empire; what are your ideals as a social studies education and how do you keep them and still teach?; and what it means to be a critical social studies educator beyond the classroom.

Citizenship is a phenomenon that encompasses the relationships between the state and individuals, rights and responsibilities and identity and nationhood. Yet the relationship between citizenship and childhood has gone relatively unexplored. This book examines this relationship by situating it within the historical development of modern forms of citizenship that have formed contemporary Western notions of childhood and citizenship. The book also engages with recent political and social theory to rethink our current view of citizenship and develops an understanding that emphasises social interdependence and calls for a concomitant re-evaluation of our public spaces that facilitates the recognition of children as participating agents within society. The book will be of interest to those working across a wide number of disciplines, including politics, sociology, education, health, social work, childhood studies, youth studies, law and social policy, together with policy-makers, teachers and practitioners in allied areas.

This guide invites the reader to think about consumption as one factor in the difficult task of building cohesive, sustainable societies based on the principle of universal well-being. The Council of Europe hopes that this reassessment will prompt people to question their choices as consumers: taking account of human rights, decent working conditions, the sustainable use of resources and our legacy to future generations. Surely consumption should be a responsible, socially committed act. An eclectic mix of academic articles, examples and illustrations makes this guide an unusual, informative work which can be readily used as the basis for discussions on this pressing social issue. This book, inspired by a contribution from the European Inter-Network of Ethical and Solidarity-Based Initiatives (IRIS), is intended as a "prototype": readers are free to adapt its contents to their own circumstances, to add relevant examples and to bring the ideas presented to life

The Figure of the Migrant in Contemporary European Cinema explores contemporary debates around the concepts of 'Europe' and 'European identity' through an examination of recent European films dealing with various aspects of globalization (the refugee crisis, labour migration, the resurgence of nationalism and ethnic violence, neoliberalism, post-colonialism) with a particular attention to the figure of the migrant and the ways in which this figure challenges us to rethink Europe and its core Enlightenment values (citizenship, justice, ethics, liberty, tolerance, and hospitality) in a post-national context of ephemerality, volatility, and contingency that finds people desperately looking for firmer markers of identity. The book argues that a compelling case can be made for re-orienting the study of contemporary European cinema around the figure of the migrant viewed both as a symbolic figure (representing post-national citizenship, urbanization, the 'gap' between ethics and justice) and as a figure occupying an increasingly central place in European cinema in general rather than only in what is usually called 'migrant and diasporic cinema'. By drawing attention to the structural and affective affinities between the experience of migrants and non-migrants, Europeans and non-Europeans, Trifonova shows that it is becoming increasingly difficult to separate stories about migration from stories about life under neoliberalism in general

What are the grounds for and limits to obedience to the state? Dorota Mokrosinska presents a fresh analysis of the most influential theories of political obligation and develops a novel approach to this foundational problem of political philosophy, an intriguing combination of the elements of natural duty and associative theories. The theory of political obligation developed in the book extends the scope of the contemporary debate on political obligation by arguing that political obligation can be binding even under the jurisdiction of unjust states. The arguments pursued in the book are illustrated with the results of sociological research concerning the reasons that governed people's attitudes to the authoritarian communist regimes in East Europe viz. communist Poland. This book provides the first detailed argument of how a theory of political obligation can apply to subjects of an unjust state.

Citizenship, both the subject and the practice, should be a bridge between the vocational aims of education and education for its own sake. Not all of life is productive: there is leisure, there is culture, both of which active citizens can defend, indeed enhance. This book may, I hope, help teachers and all involved in education (governors, parents and even inspectors) gain or reinforce a sense of civic pride and mission.

Rethinking the Struggle for Puerto Rican Rights offers a reexamination of the history of Puerto Ricans' political and social activism in the United States in the twentieth century. Authors Lorrin Thomas and Aldo A. Lauria Santiago survey the ways in which Puerto Ricans worked within the United States to create communities for themselves and their compatriots in times and places where dark-skinned or 'foreign' Americans were often unwelcome. The authors argue that the energetic Puerto Rican rights movement which rose to prominence in the late 1960s was built on a foundation of civil rights activism beginning much earlier in the century. The text contextualizes Puerto Rican activism within the broader context of twentieth-century civil rights movements, while emphasizing the characteristics and goals unique to the Puerto Rican experience. Lucid and insightful, Rethinking the Struggle for Puerto Rican Rights provides a much-needed introduction to a lesser-known but critically important social and political movement.

Citizenship rights have become vital to our sense of personal identity and social membership in modern society. In this book Maurice Roche argues that today we have to shift from the conventional post-war politics of social rights to a new politics of social obligations and personal responsibility. Recent social changes have created new problems which require rethinking of both social policy and the welfare state. In a wide-ranging discussion Roche provides a new analysis and assessment of citizenship in developed societies. The book is particularly important in its inclusion of an assessment of contemporary debates about the rise of the 'new poverty', the development of an 'underclass', as well as other 'post-industrial' changes affecting employment and family life.

What roles can and should governments play in communication policymaking? How are communication policies related to welfare politics? With the rapid globalization of commerce and culture and the increasing recognition of information as an economic resource, the grounds for defending the welfare state have shifted. Communication policy is now more widely understood as social policy. Communication, Citizenship, and Social Policy examines issues of communication technology, neoliberal economic policies, public service media, media access, social movements and political communication, the geography of communication, and global media development and policy, among others, and shows how progressive policymakers must use these bases to confront more directly the debates on contemporary welfare theory and politics.
