This laminated guide features twenty-six native trees commonly found from Alaska to Oregon, providing common and Latin names accompanied by colour photographs of identifying features such as bark, leaves or needles, flowers, cones, seeds and fruit. Information on identification, range and an illustration of each tree's silhouette make it a snap to distinguish a shore pine from a western white pine or a trembling aspen from a paper birch. Also included are traditional uses and other interesting tree facts and lore. For example, did you know that yellow cedar can live up to 5,000 years? Or that the bigleaf maple flowers are edible? Next time you go for a hike, pay attention to the forest and the trees with one of these laminated guides slipped into your back pocket or backpack.

"A user-friendly guide to identifying and understanding the spiders of the Pacific Coast. There are 67 families of spiders found in North America, and 59 of them can be found in California. This field guide will cover all 59 of those families, including introduced species and common garden spiders--those will be given extra coverage. Each family is reviewed including details of their identification, taxonomy, distribution, and natural history. There will be a full color plate for each of the families."--
