away. Our solar system is but a tiny speck in the vast fabric of the universe. The solar system is an assortment of planets, asteroids, moons, and a star that we know better as the sun.

The Sun, Earth, and Everything in the Solar System by ...

The Sun is a yellow dwarf star, a hot ball of glowing gases at the heart of our solar system. Its gravity holds the solar system together, keeping everything - from the biggest planets to the smallest particles of debris - in its orbit. The connection and interactions between the Sun and Earth drive the seasons, ocean currents, weather, climate, radiation belts and auroras.

In Depth | Sun - NASA Solar System Exploration

The Sun is massive. By volume, it contains most of the mass in the solar system—more than 99.8% of all the mass of the planets, moons, rings, asteroids, and comets, combined. It's also quite large, measuring 4,379,000 km around its equator. More than 1,300,000 Earths would fit inside it.
